Open log file in folder

Users can change some inputs or reset TransRNM for the next calculation.

#Step7 Click Reset button to reinitialize TransRNM

Log files are named after the startup time of TransRNM.

The screenshot displays the TransRNM software interface. At the top, a file explorer window shows the 'TransRNM Log' folder, containing a list of log files named with timestamps (e.g., '2022-8-18_21-24.txt'). A red arrow points from the text 'Log files are named after the startup time of TransRNM.' to this list. Below the file explorer, the main software window is visible. It includes a 'Choice behaviour' section with options like 'Gumbel', 'Normal', and 'One-point'. A 'Demand elasticity' section contains a formula $q_w = D_w(S_w) = \bar{q}_w \exp(-\mu S_w)$. An 'Operation log' section at the bottom shows a list of parameters (e.g., $\rho_3, \gamma_3, b_3, m_3$) and a log entry: 'Start TransRNM time: 21-Aug-2022 09:05:02'. A red circle highlights the 'Open log file in folder' link in the bottom right corner.

Clear/Update log

Users can clear or update the log records in the window

PS 1 Operation log

The operation log is displayed in the window, and the corresponding TXT file is stored in the default folder: C:\Program Files\TransRNM Log

Operation log Clear log Update log

To facilitate user input, TransRNM provides some default parameter values. The user can also customize these parameter values.

PS 2 Default parameter values

TransRNM sets question dialog boxes on Clear log button, Reset button and Close TransRNM button, respectively.

PS 3 Prevent mistakenly touching

1. **Install MATLAB Runtime 9.12 in advance !** (See detailed installation method in readme.txt)
2. Install TransRNM (TransRNM_setup.exe)
or Run TransRNM directly (TransRNM.exe)
3. Run both TransRNM_setup.exe and TransRNM.exe **as an administrator**
4. GitHub: <https://github.com/WangQianlian/TransRNM/tree/master>
5. Contact us
wangqianlian@foxmail.com

Thanks for your time !
